Optimal portfolio liquidation with limit orders

Statistical modeling of Vickrey auctions and applications to automated bidding strategies

Dealing with the inventory risk: a solution to the market making problem

An analytical solution to the budget-pacing problem in programmatic advertising

Joaquin Fernandez Tapia

Business and Data Analytics

France

Summary

I work at the intersection of mathematics and practical decision-making under uncertainty. My experience spans quantitative finance, real-time bidding, credit, fraud, and business performance, covering stochastic modelling, forecasting, experimentation, and policy design.

Experience

Betclic Group

Lead Core Data Analytics

January 2026 - Present (10 months)

France

- Built a reusable performance-analytics and forecasting capability that establishes a trustworthy, explainable business-as-usual baseline from seasonal patterns and sports-calendar data, then decomposes actual-versus-expected performance by driver and customer segment to help teams diagnose and localize changes in performance.
- Piloting a shared performance-review operating model with one analytics team to validate the framework in practice, clarify decision ownership, and identify what is needed to scale it and its supporting tools.
- Leading a company-wide experimentation workstream to map current practices and develop proportionate governance and tooling recommendations.

Nubank

6 years

Lead Data Scientist - Fraud Platforms

November 2023 - October 2025 (2 years)

São Paulo, Brazil

- Progressed from business analytics into data science leadership.
- Led a from-scratch initiative to redesign how fraud features and analytics were developed and delivered across Data Science, platform teams, and internal users.

- Reframed a graph-analytics platform from a visualization tool into a production-oriented system for generating fraud-model features and policies, with validation against model and business performance.
- Shortened the path from evidence to production policy through feature simulation, rapid prototyping, and iterative validation.
- Introduced embedding-based detection to surface emerging fraud patterns and new attack typologies earlier.

Lead Business Analyst - Fraud Defenses

May 2021 - October 2023 (2 years 6 months)

São Paulo, Brazil

- Owned fraud policy across onboarding and transactional fraud, balancing fraud losses against customer friction, operational load, and cost; partnered with business, product, and operations teams on monitoring and model-development strategy.
- Led the transition to real-time policy by developing the strategy and migrating rules and models to transaction time, enabling strategic credit products not feasible under batch review.
- Led an emerging-attacks program combining fast rule creation, monitoring, and fraud-operations coordination to catch collusion and new patterns before losses escalated.
- Led business-risk evaluation and policy strategy for identity verification across instant onboarding and in-transaction checks, including face match, liveness, provider evaluation, and A/B testing.

Lead Business Analyst - Credit Collections

November 2019 - April 2021 (1 year 6 months)

São Paulo, Brazil

- Built customer-communications, campaign, and offer strategy across the debt-collections journey, orchestrating push, SMS, outbound calls, and credit-bureau reporting by product and risk score.
- Ran controlled A/B experiments across communication journeys and product pricing, using segmentation, targeting, and incremental impact to optimize policy; led the development of uplift models and changes to the communications-orchestration framework.
- Led the analytics team for debt-collections policy, covering performance KPIs, delinquency and roll-rate monitoring, cohort analysis, survival curves, and loss, recovery, and cure metrics; reported credit-risk analytics and portfolio metrics to the credit committee and corporate risk meetings.

Quantitative Research

September 2017 - September 2019 (2 years 1 month)

Paris

- Applied reinforcement learning to optimal execution, modelling tactical limit- and market-order placement within a larger execution objective.
- Developed a generative model for financial time-series simulation, producing realistic market paths for testing execution strategies.
- Studied hedging under transaction costs where the underlying was costly to trade, using liquid listed options as hedging instruments; contributed to a peer-reviewed publication.

Tradelab

Quantitative Analyst - Programmatic Advertising

July 2014 - September 2016 (2 years 3 months)

Paris

- Designed and built an automated campaign-management system for ad-buying prices, budget pacing, and allocation across placements.
- Developed allocation and pacing logic to meet delivery targets while improving CTR and CPA, concentrating spend on the best-performing placements and audience segments.
- Implemented in production a multi-armed bandit algorithm for real-time decision-making and campaign optimization under limited early data.

Kepler Cheuvreux

Quantitative Research

September 2011 - September 2014 (3 years 1 month)

Paris

- Modelled optimal execution and market making using stochastic control and stochastic algorithms, with interpretable outputs—quotes, spreads, and liquidation schedules—and explicit trade-offs among market impact, inventory risk, and timing risk; benchmarked against VWAP, TWAP, and implementation shortfall.
- Performed statistical analysis of market-microstructure and order-book data.

Education

École Polytechnique

Engineering Diploma, MS in Quantitative Finance (El Karoui) · (2007 - 2010)

Université Pierre et Marie Curie

PhD, Mathematical Statistics and Probability · (2011 - 2014)

Pontificia Universidad Católica de Chile

BS, Mathematics · (2003 - 2006)
